OF MATTER-1 (CH\_22) Conduction is heat transfer  
through stationary matter by physical contact. (The  
matter is stationary on a macroscopic scale—we know  
there is thermal motion of the atoms and molecules at  
any temperature above absolute zero.) Heat  
transferred between the electric burner of a stove and  
the bottom of a pan is transferred by conduction.  
Convection is the heat transfer by the macroscopic  
movement of a fluid. This type of transfer takes place  
in a forced-air furnace and in weather systems, for

The Physics of Heat: Crash Course Physics #22 - YouTube 1/16/2019 6 © 2017 Pearson Education, Inc. Slide 22-16 The electric field of a charge is defined by the force on A. An electron. B. A proton. C. A source charge. PHYSICS Convection plays an important role in heat transfer inside this pot of water. Once conducted to the inside, heat transfer to other parts of the pot is mostly by convection. The hotter water expands, decreases in density, and rises to transfer heat to other regions of the water, while colder water sinks to the bottom. This process keeps
